RE: Beach Tilling and Escarpment Removal

Dear Mr. Gossett:

The Turtle Protection Plan, approved as a condition of the permit for beach nourishments, requires the following actions:

- 1) Till an area of the beach approximately 50 feet in width and 8,450 feet in length at the base of the reconstructed dune; and
- 2) Grade the existing escarpment along the length of the 14,700 foot shoreline to a 1 to 5 approximate slope. In 1995, SAISSA solicited written bids from five entities with the capability to perform the required work. Two prospective bidders declined to submit a bid. In 1995, Holland Contractors was selected as the low bid. The bids at that time were for a three year time period; however, we have recontacted each of the bidders and confirmed their bid for 1996. Again, Holland Contractors is the low bidder at \$15,000. The Executive Committee of the South Amelia Island Shore Stabilization Association met on Wednesday, March 27, 1996, to review these proposals and unanimously recommends that the SAISS-MSBU award the contract to the low bidder, Holland Contractors.

Funds for this work are included in the budget and are available. Attached for your review are letters and memorandums regarding the permit condition as well as the confirmed bids from three companies.

We would appreciate a review of these proposals and approval by the County Commission sitting as the MSBU Governing Board at the next County Commission meeting on April 8, 1996. This work must be performed prior to the start of the turtle nesting season.

If you have any questions, please call me.

Sincerely,

Bill
